

the KINGFISHER LIMITED

A beautiful upgrade to our popular Kingfisher vise. Polished brass and an added Tension screw, make this limited edition a must have! This small, yet durable vise, is machined entirely of stainless steel, and solid brass. Featuring our famous hook holding capability, adjustable tension, notch lock cam and 360° rotation. Also comes with a material spring.

| 9. Base Feet | |

INFORMATION

Please take note of the two grooves in the vise **JAWS #5**. These will accommodate hook sizes 24-8/0. **Midge Jaws**, available for purchase, will hold hooks down to a size 32. Large hooks should be held in the rear groove, medium hooks are best held in the groove closest to the **Jaw** tips. Smaller hooks should be held in the **Jaw** tips.

Tension on the hook can be achieved by adjusting the **Forcing Cone #4**. To tighten, or loosen, the grip of the **Jaws** on the hook, the **Cam Handle #1** must first be raised, so that the **Jaws** will be in the open position. Adjust the **Forcing Cone** only enough so as that the **Jaws** will hold the hook securely. **Over tightening the Forcing Cone, or adjusting the cone while the cam is in the down position, may cause the jaws to lock, and possibly remain, closed.**

To **Clean & Maintain** your vise use a soft cloth with a lubricant spray to wipe your vise periodically. To keep your **Forcing Cone** and out your **Jaws**. A light coating of marine boat grease, available at your local auto parts store, may be applied to the **inside of the forcing cone & the outside shank of the Jaws.**

Thank you for Choosing
Dyna-King, Inc. We hope that your new KINGFISHER LIMITED vise will bring you many years of fly-tying enjoyment!
